

Radiology Report

Facility: Valley Imaging Center

Date of Exam: June 10, 2026

Patient: Arthur Pendelton

Exam: X-Ray Left Knee (AP, Lateral, Sunrise views)

Referring Physician: Dr. Samuel Vance

Clinical Indication: Chronic left knee pain, evaluation for osteoarthritis.

Findings:

There is extensive loss of articular cartilage in the medial compartment with bone-on-bone contact. Significant subchondral sclerosis and large marginal osteophytes are noted on the medial femoral condyle and tibial plateau. The patellofemoral joint shows moderate degenerative changes. No acute fracture or dislocation is identified.

Impression:

Advanced degenerative joint disease of the left knee. The findings are consistent with Kellgren-Lawrence Grade 4 joint space narrowing.

Radiologist: Dr. Helen Cho, MD
