Al-Rashid Neurology — Consultation Note

Visit Date: 2026-07-13 **Provider:** Fatima Al-Rashid, MD

Patient: 41 years old.

History: Patient reports headaches most days of the month for several months, clinical impression consistent with chronic migraine. Headache diary referenced by patient but not available in the chart today.

Preventive Medication History: Topiramate 50mg daily, trialed for approximately 6 weeks in 2026, discontinued due to inadequate response.

Additional Review: No other botulinum toxin therapy. This is an initial request.

Assessment/Plan: Chronic migraine by clinical impression. Recommend onabotulinumtoxinA.

Electronically signed: Fatima Al-Rashid, MD
