Ibe Orthopedic Surgery — Consultation Note

Visit Date: 2026-07-11 **Provider:** Samuel Ibe, MD

Subjective: 63-year-old patient with severe left knee osteoarthritis. See attached imaging and conservative management summary.

Additional Findings: BMI 27.4, documented today. Knee clinically free of infection — no warmth, erythema, or effusion. No other contraindications noted.

Assessment: Severe left knee osteoarthritis, failed conservative management.

Plan: Recommend proceeding to left total knee arthroplasty.

Electronically signed: Samuel Ibe, MD
